50 South Drive
Bethesda, Maryland 20984, USA*

Erin Jimenez studied developmental biology during her undergraduate training at the University of California, Los Angeles. She earned a PhD in biology at Johns Hopkins University, Baltimore, MD. Currently, Erin is a research fellow in the National Human Genome Research Institute at the National Institutes of Health where she investigates the mechanisms involved in zebrafish hearing regeneration.

Ashwin A. Bhandiwad

*Allen Institute for Brain Science
615 Westlake Avenue N
Seattle, Washington 98109, USA*

Ashwin A. Bhandiwad is a scientist at the Allen Institute for Brain Science where he uses computational topology to develop new ways of visualizing structures of the brain. Ashwin received his PhD in psychology from the University of Washington, Seattle, where he studied the effects of noise exposure on auditory sensitivity in larval zebrafish. Before joining the Allen Institute, Ashwin was a research fellow at the Eunice Kennedy Shriver National Institute for Child Health and Human Development, National Institutes of Health, Bethesda, MD, where he worked on neural circuits that regulate instinctive behaviors.
